

LTL CONFIG APP

Simplify LTL carrier and services management.

A new, convenient way to manage your LTL information.

Evolving expectations and requirements bring constant change in the way companies ship parcel via LTL. Although these changes streamline the shipping process, implementing them can be time consuming and cumbersome. Enter ProShip's LTL Config App, an add-on that puts you in control of your premise LTL carriers and services.

What is the LTL Config App?

Meet the latest edition to ProShip's Add-On offering geared towards the unique needs of LTL shippers.

The LTL Config App allows ProShip customers to manage their LTL carrier services from a simple-to-use, browser-based tool. With the click of a button, shippers can access and update

a wide variety of LTL-specific features, including **LTL Carriers**, **LTL Services**, **LTL Rates**, **LTL Accessorial Fees**, **ProNumbers** and more for your **Premise LTL Carriers**.

Don't have staff to manage these features? No problem—your tool can also be accessed

by ProShip services staff, who can perform your updates quickly and at a significant cost savings vs. a manual process (which is complicated, time-consuming and expensive, requiring more professional service hours).

Not only does LTL config app make managing your current LTL program simple, it makes it easy to scale as your needs evolve. Simply negotiate your contracts with desired carriers and load them into the LTL Config App for instant access to rates.

Save months and money with the LTL Config App.

The LTL Config App makes rate updates simple and cost-effective. Let's take a mid- to large-scale manufacturer and calculate the potential savings.

Pre-LTL Config App

3+ months and \$25,000+

Previous time and fee to load new rates into ProShip instance.

Using LTL Config App

<1 month and <\$10,000+

New fee for ProShip services team to load new rates into ProShip instance.

\$0*

No fee* for companies with a resource in-house who is familiar with LTL rate structure.

**minus the cost of the tool*

Potential 5 year savings \$125K+

How does the LTL Config App work?
