

PARCEL CONFIG APP

Flexible, browser-based ProShip server management from near or far.

PROSHIP APP

A new, convenient way to remotely configure and maintain a ProShip server.

An ever-changing shipping landscape requires teams to be nimble and responsive. That's why ProShip developed the new Parcel Config App, an add-on that provides remote, browser-based access to a ProShip server configuration to manage carrier accounts, rate shop groups, document standards and more.

What is the Parcel Config App?

Simply open a browser window to configure a ProShip server with ProShip's new Parcel Config App add-on.

The Parcel Config App allows ProShip customers to remotely configure and maintain a ProShip server from a simple-to-use, browser-based tool. With the click of a button, you'll be

able to perform a wide variety of maintenance tasks, including the ability to **configure and alter new and existing shipper locations** (such as stores and warehouses), the capability to **create and remove carrier services** at will, access to **add, remove and alter scheduled jobs**, and more.

For the carriers that require configuration files to be manually set, users can **Update Carrier Rate, Zone, Routing, Accessorial, and Time in Transit Files** without having to be on the server.

With the Parcel Config App, which uses secure OAuth authentication, ProShip

Customers are less reliant on IT and ProShip Professional Resources, and because the configurations aren't done directly on the server itself, non-technical resources can utilize it to complete common tasks (allowing logistics teams the flexibility and nimbleness needed to quickly adapt).

A closer look at what the Parcel Config App can do for your business.

Whether you are a new or existing ProShip customer, the Parcel Config App **provides shippers easy, browser-based access to a ProShip server** to complete common tasks that once required a remote desktop session. This flexibility allows logistics teams to be self-sufficient and enables them to quickly act on necessary tech changes, saving money on tasks that once required IT or ProShip Professional Services help.
