# WorldLink

Your **Company** Software Stack

Any well-integrated shipping solution starts with your **existing software stack**.

Today's growing companies rely on WorldLink to automate and optimize the way your **OMS**, **WMS**, **ERP**, **Ecom Suite**, **Automated Processes** (such as Printer Applicators, Batch Processes, etc.) and **shipping software** work together to deliver on shipment execution needs while reducing the costs in the supply chain. A complete integration includes the write-back of all your resultant data, such that you can control it.

Interfaces

As not every shipment is executed the same way, WorldLink has interfaces that allow you to execute a workflow the way you need to:

- **Web Client**- Extend shipping to offices, stores, and more. Execute within warehouses and high-volume mailrooms for maximum speed and power
- **WorldLink API** - Enable rich shipping options as part of your software stack

Platform

**Multi-Carrier:** Leverage the carriers you need in North America.

- **Connectivity**
- **Service options** (Same-Day, Express, Ground, Regional, LTL, Air Freight)
- **Technology Options** (premise calculation, carrier API)
- **Normalization**
- **Compliance** (includes contract services)

Rapid Deployment: Get up and running quickly.

- **Quick to implement**
- **Dedicated set-up team**

Feature-Rich: Robust functionality to support a multitude of shipping needs.

- **Always up-to-date compliance**
- **Continuous updates (CI/CD)**

Control: Implement changes in one centralized location.

- **Centralized enforcement**
- **Consistency between all business locations**

Flexibility: Access our service where it makes sense for your business.

- **Application-aware secure cloud**
- **Premise installations**
- **Hybrid approach**

Configurability of Platform

Every business has a variety of unique needs to be successful. What works for one shipping environment may be completely different than what works for another. That's why WorldLink has focused our efforts on creating high-value options for our customers to leverage, while still having the flexibility to add custom logic.
